Click the **Save icon** on the toolbar.

Select the file format to OZ Report Data File(*.ozd), click the **[Option]** button.

Password :	Password to open the ozd file.
Confirm :	Confirm password.
Include edits :	Select whether to save the OZD file, including memo, comments, callout shapes(lines, arrows, rectangles, circles), text edits and input component value.
Save all reports :	Save all open reports in one OZD file. If not check, save only the current report.
Include Image :	Save OZD file including the image of which path is an URL (http://, ozp://, file://) or the note component of which text comes from an URL(http://, ozp://, file://).

Click the **Save icon** on the toolbar.

Select the file format to Adobe PDF File(*.pdf), click the **[Option]** button.

Description(PDF Information) :	Title : The title.
	Author : The author.
	Subject : The subject.
	Keywords : The keywords.
	Application : The application.
Open Restriction :	Set a password to open the file.
Editing Restriction :	Set a password to edit the file.
User access permissions :	Printing Allowed : Allow printing. If open the PDF file saved by unchecking this option, [Print] menu and icon are disabled.
	Copy Allowed : Allow copying the contents. If open the PDF file saved by unchecking this option, [Copy] menu and icon are disabled.
	Changes Allowed : Allow changing. You can see this option in the Security tab of Document Properties dialog box.
Save chart to image :	Save chart as an image. Use this option if font or direction of the text on the exported chart is different from those shown on the viewer.
Embed Font :	Save a report with its fonts. Only the true type font those have no license problem for recreating font file can be saved. PDF file containing font files may increase its size.

Click the **Save icon** on the toolbar.

Select the file format to Microsoft Excel 97-2003 File(*.xls), click the **[Option]** button.

Auto Select :	Auto Selected : "Fit to" option of Excel's Page Setup dialog box.
	Width : "page(s) wide by" option of Excel's Page Setup dialog box.
	Height : "tall" option of Excel's Page Setup dialog box.
Display option :	Show gridlines : Show gridlines on a Excel's worksheet.
Text control :	Shrink to fit : "Shrink to fit" option of Excel's Format Cells dialog box.
Ratio :	Zoom In/Out : Sets a worksheet magnification.
Freeze panes :	Row : Sets "Freeze Top Row" option of a worksheet.
	Column : Sets "Freeze First Column" option of a worksheet.
Save mode :	Keep the report form : Save the report keeping original forms and properties as much as possible.
	Ignore color, border, merge cell : Save the text of label as a simple list, but ignore label color, border, and merge condition. At this time all blanks between pages are automatically removed.
	Remove adjacent cell after dividing : Remove adjacent cells after splitting the merged

cell. For example, if a merged label in the report is divided into four cells in the Excel, the only one cell on the left top remains and all the other cells will be removed. The cell on the right side of the removed cell moves to where the removed cell was located.

Save type :

Column pages per sheet : If crosstab or chart have multiple vertical pages on the same column, these vertical pages are saved into the same sheet.

Page per sheet : Create one sheet per page.

Column first : One sheet per page in column direction.

Row first : One sheet per page in row direction.

Page :

Remove blank lines between pages : Remove blank lines between pages.

Font :

Font : Font name for all cells in excel to be created. If not set the font, every label is saved using its own font.

Size : Font size for all cells in excel to be created. If not set the font, every label is saved using its own font size.

Line :

Remove line: Specify lines or range of line to be removed and not saved.

Except first page : Remove lines from the second page to the last page.

Only first page : Remove lines from only the first page.

All pages : Remove lines from all pages.

Format : **Numeric type text convert to number :** Specify the display format for numeric string. The format string entered in the text box will be applied to display format of cells in excel. The category in display format will be determined by the excel program. For example, the category can be "user defined" or "currency" for the format "#,###.00". If open an excel file saved not checking this option, the cell with numeric text shows error correction icon().

Apply to numeric format label only : Apply the display format to only the numerical type labels. Uncheck this option to apply the format to all types of label.

Convert data to general(cell format) : Set cell display format to "general".

Minimum Cell Size : **Width :** Minimum cell width. When save a report label into an Excel's cell, and if the cell width is smaller than this value it will merge with the cell on right side.

Height : Minimum cell height. When save a report label into an Excel's cell, and if the cell height is smaller than this value it will merge with the lower cell.

Save Format : **Save as mht (Supports Office XP and up) :** Save report in mht format of Excel.

Click the **Save icon** on the toolbar.

Select the file format to Microsoft Excel File(*.xlsx), click the **[Option]** button.

Auto Select :	Auto Selected : "Fit to" option of Excel's Page Setup dialog box.
	Width : "page(s) wide by" option of Excel's Page Setup dialog box.
	Height : "tall" option of Excel's Page Setup dialog box.
Display option :	Show gridlines : Show gridlines on a Excel's worksheet.
Text control :	Shrink to fit : "Shrink to fit" option of Excel's Format Cells dialog box.
Ratio :	Zoom In/Out : Sets a worksheet magnification.
Freeze panes :	Row : Sets "Freeze Top Row" option of a worksheet.
	Column : Sets "Freeze First Column" option of a worksheet.

Convert data to general(cell format) : Set cell display format to "general".

Minimum Cell Size :

Width : Minimum cell width. When save a report label into an Excel's cell, and if the cell width is smaller than this value it will merge with the cell on right side.

Height : Minimum cell height. When save a report label into an Excel's cell, and if the cell height is smaller than this value it will merge with the lower cell.

Click the **Save icon** on the toolbar.

Select the file format to Microsoft Word Document(*.doc), click the **[Option]** button.

Word save mode : **Save As XML (Supports Word 2003 and up) :** Save as Word files in XML format. If Word is not installed on your PC, please check this option.

Table save mode : **Save As Table :** Save a table, fixed table or crosstab component as a table in MS word.

Band save mode : **Save page header/footer band to header/footer :** Save the page header/footer band of a report into the header/footer of MS Word.

Click the **Save icon** on the toolbar.

Select the file format to Microsoft Presentation(*.ppt), click the **[Option]** button.

Table save mode : **Save As Table :** Save a table, fixed table or crosstab component as a table in MS Powerpoint.

Click the **Save icon** on the toolbar.

Select the file format to Web Page(*.html), click the **[Option]** button.

Set font size :	Font size for all text in HTML file to be created. If set the font size, all the text labels will be saved using this font size in HTML file.
Save image to :	Path to save image files those are included in HTML file.
Page spacing :	Page spacing by the number of lines. Lines / Horizontal : Horizontal line counts between pages. Lines / Vertical : Vertical line counts between pages.
Offset :	X and Y coordinates of the position on which the HTML file is displayed. Offset / X axis : X coordinates. Offset / Y axis : Y coordinates.
Save mode :	Save each page to different file : If check, save every page of the report as an independent file. Otherwise, save all pages in one file. Encoding : Encoding type. ANSI : Ansi. Unicode : Unicode. UTF-8 : UTF-8.
Page :	Title : Page title of html file.
Version :	HTML Version : Html version. None : None. 4.01 : 4.01.
Restriction :	Enter the password that is needed to open the exported HTML files. When you open the password-protected HTML file, the web page for inputting the password will be executed. The report is displayed only when the password is matched. But, the image files is not password-protected.

Click the **Save icon** on the toolbar.

Select the file format to Comma Separated Values File(*.csv), click the **[Option]** button.

Field delimiter :

Delimiter : Column delimiters

tab : tab

space : space

| : |

/ : /

~ : ~

comma : comma

empty : empty

Other : for "user define"

User define : User defined delimiter character

Page number break :

The page break text appears at the bottom of each page.

Break type : Select one from the break type list as

below (n: page number)

None : No page break text

n <PAGE> : n <PAGE>

n <PAGE> --- : n <PAGE> ---

--- n <PAGE> : --- n <PAGE>

<PAGE> n : <PAGE> n

<PAGE> n --- : <PAGE> n ---

--- <PAGE> n : --- <PAGE> n

<PAGE> : a text string to replace '<PAGE>'

Page spacing : The number of blank lines after the page break. The page break comes first and blanks lines next.

Remove lines : **Remove lines :** Specify line or range of lines in the pages to be removed and not saved.

Except first page : Remove lines from the second page to the last page.

Numeric data : Use the thousands separator for numeric type label text.

Insert 1000 separator : Insert the thousands separator

Delete 1000 separator : Remove the thousands separator

Save mode : **Save As Table :** When saving tables, crosstabs, fixed table components as CSV file, save to split the merged label. The text is applied to the label in the upper left corner of the divided label. The text of the other label is blank.

Encoding : Encoding type.

Size :	Sets the size of the file to the specified size. Width : Width. Height : Height.
Set size by DPI :	Sets the size of the file to the specified DPI. DPI : DPI.

Click the **Save icon** on the toolbar.

Select the file format to Scalable Vector Graphics(*.svg), click the **[Option]** button.

Save Option : **MultiPage save as one file :** Save all pages of the report in one file. If you do not check this option, the report is saved as a separate file for each page. If you check this option, page borders are displayed per page and the vertical gap is added between pages. Also, the report of a structure that extends in the horizontal direction is saved and listed in the vertical direction.

Click the **Save icon** on the toolbar.

Select the file format to Hangul File(*.hwp), click the **[Option]** button.

Table save mode : **Save As Table :** Save a table, fixed table or crosstab component as a table in Hangul.

Label save mode : **Keep label size :** Export labels to Hangul keeping the original size. The "Size adjustment" option under "Basic" tab of "Properties" menu of Hangul is checked.

Location save mode : **From the paragraph :** This option makes Hangul to recognize the label or table as one paragraph. The "From the paragraph" option under "Basic" tab of "Properties" menu of Hangul is checked.

Band save mode : **Save background band to background page :** Save background bands of a report into a background of Hangul.

Save page header/footer band to header/footer : Save the page header/footer band of a report into the header/footer of Hangul.

Click the **Save icon** on the toolbar.

Select the file format to Hangul97 File(*.html), click the **[Option]** button.

Table save mode : **Save As Table :** Save a table, fixed table or crosstab component as a table in Hangul 97.

Click the **Save icon** on the toolbar.

Select the file format to Web Page Save File(*.mht), click the **[Option]** button.

Font : Set the font and font size for all text in MHT file to be created. If set, font and font size of all labels in the report are ignored.

Font : Font name.

Size : Font size.

Restriction : Enter the password that is needed to open the exported MHT files. When you open the password-protected MHT file, the web page for inputting the password will be executed. The report is displayed only when the password is matched. But, the text of the report is encrypted, the image data is not encrypted.

Click the **Save icon** on the toolbar.

Select the file format to Jungum Global File(*.gul), click the **[Option]** button.

Table Save Mode : **Save As Table :** Save a table, fixed table or crosstab component as a table in Jungum Global.

Click the **Save icon** on the toolbar.

Select the Destination to Mail or OZ Mail, click the **[OK]** button.

Select Mail to send by the email program installed on the your computer and select OZ Mail to use the email program which is provided by OZ Report.

Send to your email program

Select the file format you want to attach to the email in the Save dialog box, select the Destination to Mail and click the **[OK]** button. Run your email program.

Send to OZ email program

Select the file format you want to attach to the email in the Save dialog box, select the Destination to OZ Mail and click the **[OK]** button.

Set the email options in the Sending dialog box. Mail server settings, click the **[Configuration]** button.

After completing the email settings and click the **[Send]** button in the Sending dialog box.

Click the **Print the report icon** on the toolbar.

Set the printer name, number of copies, print range and other options in the Print dialog box, click the **[OK]** button.

For detailed printing options such as gray printing or handouts, click the **[Option]** button in the Print dialog box.

Target paper :

If multiple reports are bound as single report, paper type is shown in the format of By Report(paper size of report1, paper size of report2, ..., paper size of reportn) and Paper orientation option is disabled.

ex) By Report(A4,A3)

Adjust printing scale :

To print by original design size even if the printing paper size is smaller than the design paper size, uncheck Adjust printing scale option in the Print dialog box, and check Print divide option in the Option dialog box.

Click the **Etc icon** on the toolbar > Click the **[Show tree]** menu.

The report tree window appears on the left side on the OZ Viewer and all open reports are shown as in tree format.

The contents are displayed in the Report tree window if the report is set to contents. Click the contents, go to the page.

The screenshot shows the OZ Viewer application. On the left is a tree view of the report structure. The 'Oz' folder is expanded, showing 'Sales Report' which contains 'Contents', '1. Sales Summary', '2. By Sales Person', '3. By Country', and '4. By Category'. '2. By Sales Person' is selected. On the right is a preview of the report titled 'OZ Basic Report Education/TOC Link Report'. It shows the section '2. By Sales Person' with a sub-section 'Bima Malek'. Below this is a table with columns 'Country', 'CategoryName', 'NOrders', and 'TotalSales'. The table shows data for the United States across four categories: Bikes, Components, Clothing, and Accessories, with a 'Sum' row at the bottom. Below this table is another sub-section 'Brad Taylor' with a similar table structure.

OZ Basic Report Education/TOC Link Report

2. By Sales Person

Bima Malek

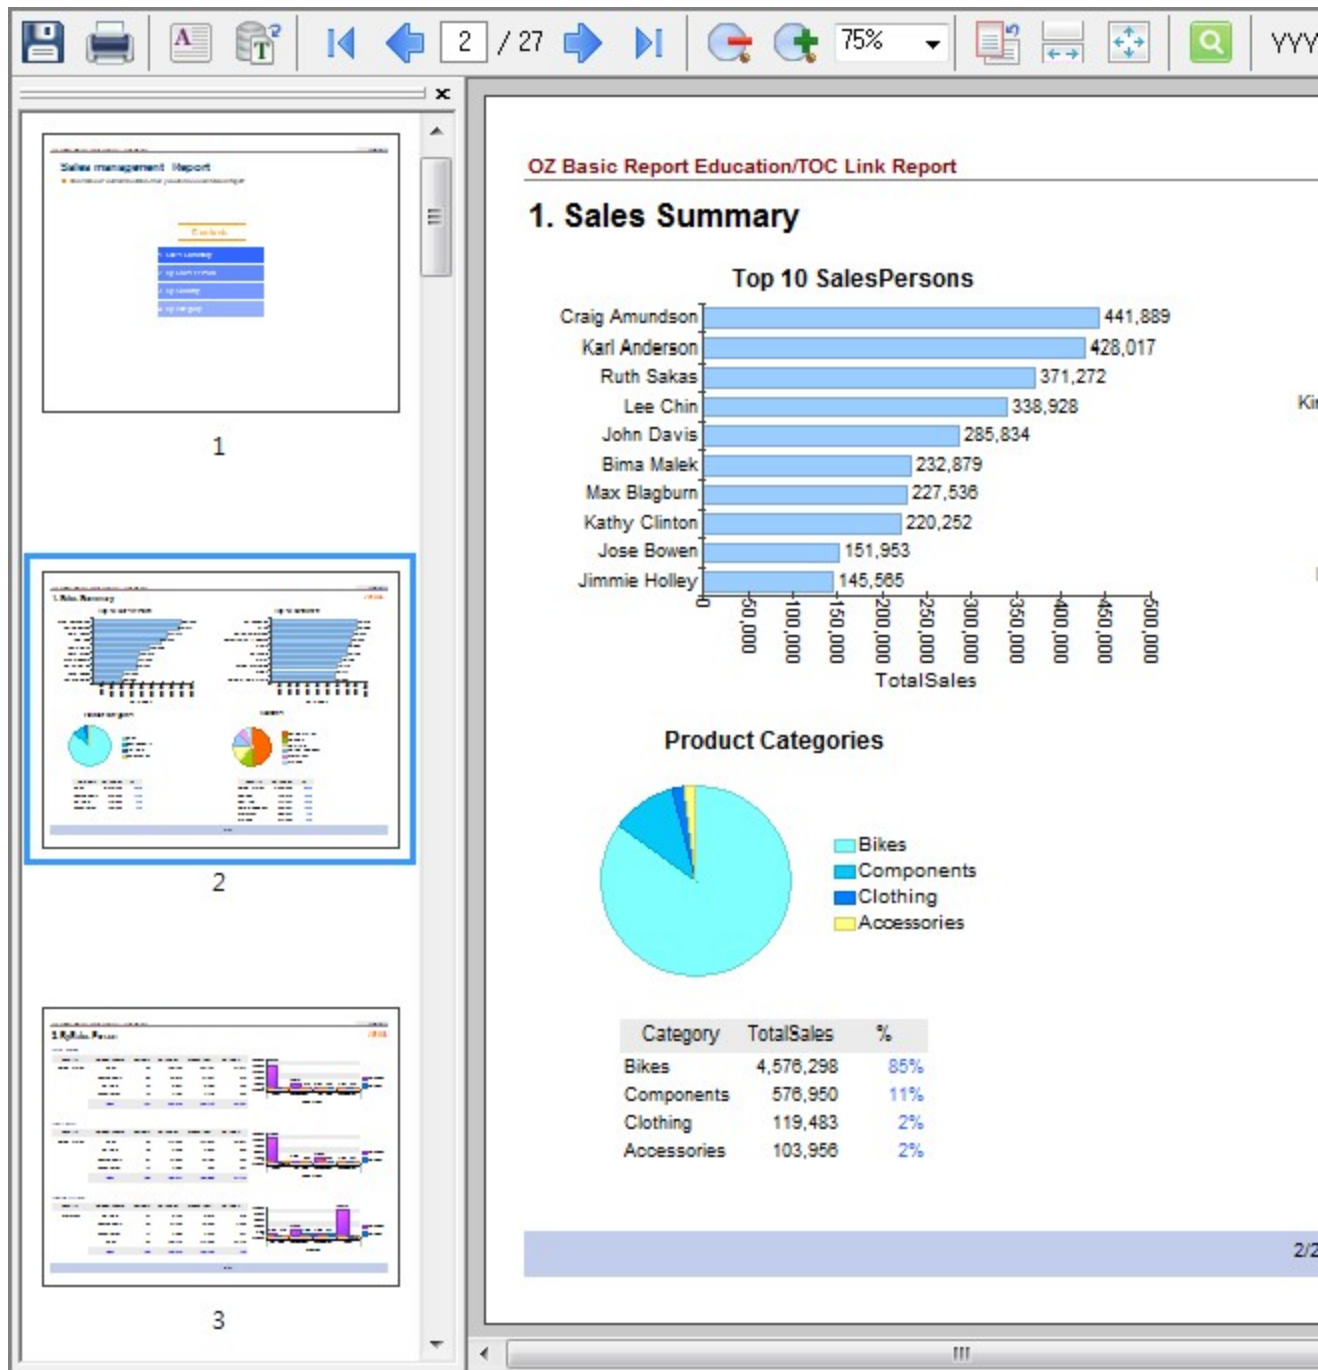

Country	CategoryName	NOrders	TotalSales
United States	Bikes	83	199,18
	Components	49	28,47
	Clothing	25	3,48
	Accessories	10	1,74
	Sum	167	232,87

Brad Taylor

Country	CategoryName	NOrders	TotalSales
United States	Bikes	60	117,99
	Clothing	24	2,89
	Components	47	21,43
	Accessories	12	1,34
	Sum	143	143,67

Click the **Etc icon** on the toolbar > Click the **[Show thumbnail]** menu.

The report thumbnail window appears on the left side on the OZ Viewer.

Click the **Etc icon** on the toolbar > Click the **[Report refresh]** menu.

To refresh the report for each period, set time interval in the form of "hh:mm:ss" and click the **[Start]** button in the Refresh Report dialog box.

To immediately refresh the report, click the **[Refresh now]** button.

Click the **Add memo icon** on the toolbar, and draw a memo box by drag & drop.

To enter text in memo, double-click on a memo, and then enter text. After the end of the text entry, click any report area other than the edit box.

To set the font, background color, the border and other properties of a memo, click the **[Change properties]** menu on the pop-up menu of memo.

To change a memo to the image, bar code, HTML labels, etc., click the **[Change Drawing type]** menu on the pop-up menu of memo and click the component type menu.

Click the **Save data icon** on the toolbar.

It is a function to save all of the data added to the data tree of the report as text format.

Set the delimiter, file path, encoding and other options in the HDM Option box, click the **[OK]** button.

Format :

Delimiter : Column delimiter

tab : tab

space : space

| : |

/ : /

~ : ~

comma : comma

Other : for "user define"

User define : User defined delimiter character

Use indentation : If the data module to be saved has master-detail relationship, the detail data is indented to distinguish from master data.

Save To :

file save path

enter path string or use **Browse** dialog

Save mode :

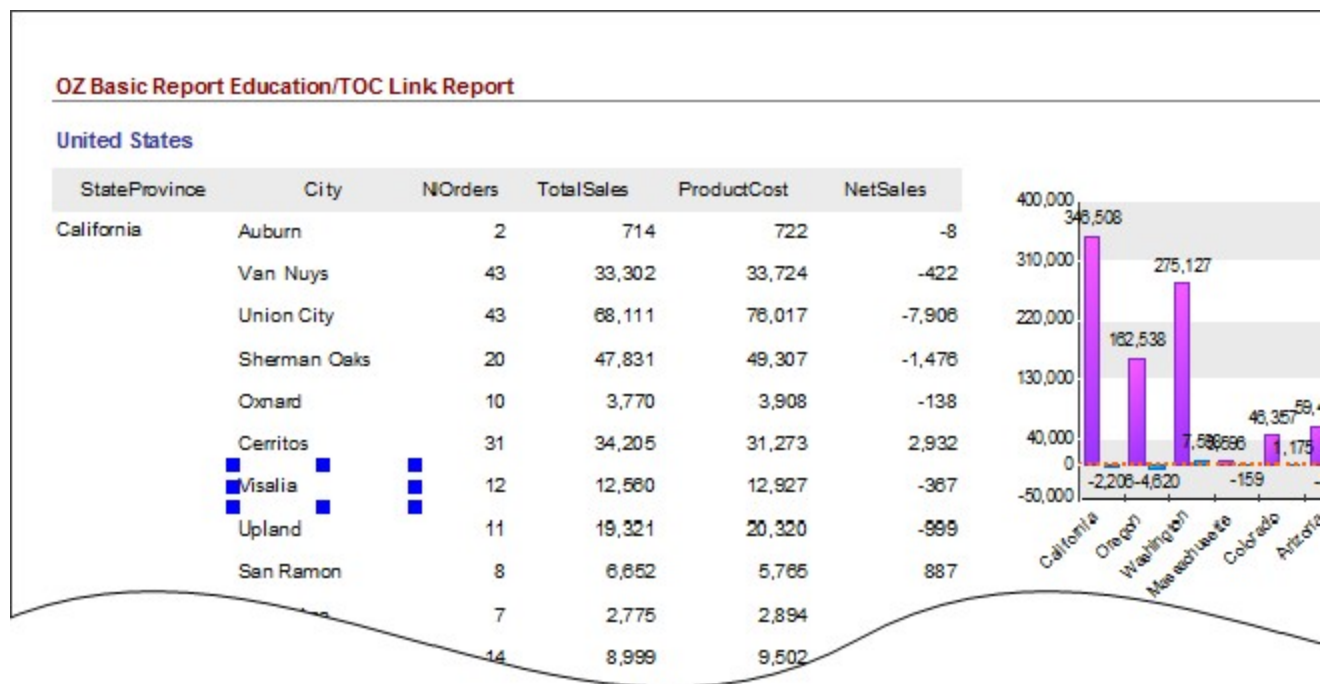

Encoding : Select encoding type.

ANSI : Ansi

Unicode : Unicode

Click the **Search icon** on the toolbar.

Set the find what, direction and other options in the Find dialog box, click the **[Find Next]** button. The tracker will display the borders of the label which is found.

The pages of OZ Report consists of a matrix of rows and columns. You can navigate to a page in column or row direction.

The Page move toolbar allows to navigate to the next, previous or specified page number. The Page coordinate window allows the user to visually move to the page on matrix of rows and columns.

Move the page using the Page move toolbar

Click the **page move icon** on the Page move toolbar. Enter in the text box to the page number you want to move.

Move the page using the Page coordinate window

Click the **Etc icon** on the toolbar > Click the **[Page coordinate window]** menu. Click the Move up, down, left, and right button.

Click the **Etc icon** on the toolbar > Click the **[Page coordinate window]** menu.

Click **[Show Report Structure]** button and click your page icon with <Shift> key in the Report structure window.

The blue check() is displayed on selected page icon. The horizontal, vertical and total page number are shown on the Page coordinate window.

Select multiple pages

You can select multiple pages by using <Shift> key, drag & drop and double-click on the Report structure window.

n <Shift> key

Click on the page repeatedly while holding down the <Shift>button.

n Drag & drop

Drag and drop the selected page area.

n Double-click

If double-click a page, all pages on the row that includes the double-clicked page are selected.

If you choose to "Selection" option to print range or save range, only the blue checked pages will be printed or saved.

You can display the report in the following five ways.

Single page

Right-click in the report window > Click the **[Page Display]** menu > Click the **[Single Page]** menu.

Displays one page at a time in the viewer window.

Single page fit screen

Click the **Single Page Fit Screen icon** on the toolbar.

Displays one page at a time in the viewer window and automatically adjust the page size to fit into the window.

Continuous

Right-click in the report window > Click the **[Page Display]** menu > Click the **[Continuous]** menu.

Display pages continuously while maintaining its original horizontal and vertical direction.

Single page continuous

Right-click in the report window > Click the **[Page Display]** menu > Click the **[Single Page Continuous]** menu.

Display pages vertically and continuously by single page on the viewer window.

Single page continuous fit width

Click the **Single Page Continuous Fit Width icon** on the toolbar.

Display pages continuously by single page and fit the page width to the window width.

The OZ Report Viewer provides various edit functions such as modifying properties of a label or chart and changing the data of the report.

Change the text

Double-click the label. Enter the text in the text edit window. To apply the entered text, click any report area other than the text edit window.

Resize

Click the label. Drag & drop to the size you want.

Move the position

Click the label. Drag & drop to the position you want.

Change properties

Right-click on the label > Click the **[Change properties]** menu. Change the properties of the paragraph, fonts, borders in the Format dialog box and click the **[OK]** button.

Change the drawing type

Right-click on the label > Click the **[Change Drawing type]** menu. Click the drawing type menu you want to change.

Set whether to print

Right-click on the label > Click the **[Do not print]** menu.

If click the **[Do not print]** menu, check sign appears in front of the menu and the label will not be printed. To print the label, click the **[Do not print]** menu again.

You can edit the label only designed to be able to edit the label.

Change the chart type

Right-click on the chart > Click the **[Change properties]** menu. Click the type of chart in the Edit Chart dialog box and click the **[OK]** button.

Move the position

Click the chart. Drag & drop to the position you want.

Rotate the chart

Right-click on the chart > Click the **[Rotatable]** menu. Move the mouse in the desired direction while holding down the left mouse button.

You can edit the chart only designed to be able to edit the chart.

There are two ways how to change the data of the report.

Using the input parameters

Click the **Input parameter icon** on the toolbar.

Set the parameter value in the Input parameters dialog box, click the **[OK]** button.

Using the search toolbar

Enter search conditions in the **search toolbar**, click the **Refresh icon**.

You can change the data of the report only designed to be able to change the data.

Click the **Etc icon** on the toolbar > Click the **[Page setup]** menu.

Set the margin and unit in the Page setup dialog box, click the **[OK]** button.

Margin : Set top and left page margin. To set right and bottom margin, check **Auto adjust margin** option

Unit : **Unit :** measurement unit for margin

pt : point

inch : inch

cm : centimeter

Margin Option : **Use Default :** set to default margin value
